

Head Lice

Head lice do not spread disease in the United States but scratching can result in secondary infections.

If hair can be combed with a fine-toothed comb, remove lice and eggs with thorough combing. Apply lice-killing shampoo following labeled instructions. Discourage head-to-head contact. Do not exclude infested students from school.

What Schools Can Do

- Accurately identify live (crawling) lice and/or nits within 1/4" of scalp, on student's head.
- Notify parents at the end of the day.
- Provide educational information on the biology & management of head lice to families and staff.
- Do not spray or fog rooms, bedding, furniture or other items.
