

March 3, 2026

Dear Valued Customer:

At Syngenta, we are committed to delivering effective and reliable solutions that address the challenges of today's farmers. We value the trust you place in our portfolio and believe it is important to communicate transparently when there are significant updates affecting our products.

As part of our ongoing portfolio management process, we rigorously evaluate each product to ensure it continues to meet customer needs while also aligning with our long-term business and investment objectives. This review process is essential to maintaining the high standards of quality, service, and innovation you expect from Syngenta.

For more than three decades, Syngenta and our predecessor companies have made substantial and sustained investments in the Gramoxone® brand family. Throughout this time, we have remained committed to stewarding and supporting this technology, maintaining its registration, and ensuring its availability as an important agronomic tool.

After several years of continued investment and careful evaluation, we have reached the conclusion that Gramoxone® is no longer financially viable within our portfolio. As a result, we have made the decision to discontinue sales of Gramoxone® Herbicide. This decision is based solely on business and financial considerations and is not related to any regulatory or legal action.

We will continue to sell Gramoxone® Herbicide at current pricing while supplies last, or until **December 31, 2026**, whichever occurs first.

If you have questions or would like assistance in evaluating alternative solutions, please contact your Syngenta representative. We remain fully committed to working with you to identify options that support the productivity, quality, and profitability of your business.

Thank you for your continued confidence in and support of the Syngenta portfolio.

Sincerely,

A handwritten signature in black ink that reads "Jeff Cecil".

Jeff Cecil  
Head, Crop Protection Marketing
