INTRODUCTION

The purpose of this report is to summarize data on newly diagnosed cases of cancer (cancer incidence) and deaths with cancer as an underlying cause (cancer mortality) among Maine residents. This report provides information on the most frequently diagnosed cancer types in Maine. Data are presented at the county and public health district levels for all cancer types combined, the top four cancers in Maine (female breast, prostate, lung and bronchus, and colon and rectum cancers) plus the following: tobacco-related cancers (excluding lung and bronchus cancer), urinary bladder cancer, and brain and other nervous system cancer.

The information contained in this report may be used to determine cancer burden and to guide programs and policies targeted at reducing the occurrence and impact of cancer.

The Maine CDC Cancer Registry collects information on all cancer cases diagnosed in Maine according to State Law Title 22, Chapter 255. The Registry also receives data on Maine residents who have been diagnosed in other states from other state registries.

Cancer data in Maine are available approximately three years after the reporting period. The 2016 annual report is based on new cancer cases diagnosed in 2013 (cancer incidence) and cancer deaths occurring in 2013 (cancer mortality). This time-lag is consistent with reporting standards used throughout the U.S. to ensure high quality data. Reasons for this delay include the time it takes for a state cancer registry to:

- receive cancer cases from reporting sources including hospitals and pathology labs,
- follow up to ensure important information about the cancer is correct,
- consolidate state data, and
- carry out data quality checks.

Additional information and publications about cancer in Maine can be found at the websites of the Maine CDC Cancer Registry¹ and the Maine CDC Comprehensive Cancer Control Program².

SUMMARY OF FEATURES

This report contains the following data:

- Rates of new cancers and deaths in Maine residents by site (part of the body), sex and county.
- U.S. data by site and gender (for comparisons with Maine data).
- Age-specific incidence data for all sites combined, the most common cancer sites, and urinary bladder cancer.

- Malignant and non-malignant incident cases of brain and other nervous system tumors.
- Rates for groups of cancers that are obesity-related and HPV-associated.
- Rates for summary grouping of tobacco-related cancers (the definition has been updated to include colon and rectum and liver cancer).
- Trends in incidence and mortality for all sites combined and selected cancers (see pages 26-30, 41-42).

TECHNICAL NOTES

Rates:

Incidence and mortality rates are calculated per 100,000 population. The year 2000 U.S. standard population was used for age adjustment.

Confidence Intervals and Statistical Significance:

Ninety-five percent confidence intervals are provided for all rates. If the 95 percent confidence intervals for two rates overlapped, the incidence rates were considered similar. If the confidence intervals did not overlap, the rates were considered to be significantly different. Maine rates that are significantly higher than national rate and county/district rates that are significantly higher than the Maine rate are shaded orange ().

Data Analysis:

Counts and rates presented in this report were produced using the Surveillance, Epidemiology, and End Results (SEER) Program, Surveillance Research Program, National Cancer Institute, SEER*Stat 8.3.2 software.

Data Sources:

Maine incidence data are obtained from the Maine CDC Cancer Registry. Mortality data for Maine and the U.S. are provided by the National Center for Health Statistics and accessed through SEER*Stat. The Maine mortality data is collected by Maine CDC's Data, Research, and Vital Statistics and provided to NCHS through cooperative agreement. National data are used for comparisons to Maine rates. Incidence data for U.S. and U.S. White rates were provided by the North American Association of Central Cancer Registries (NAACCR). The datafile, NAACCR Cancer in North America (CINA) Plus Standard File, includes incidence data from registries that met NAACCR criteria for high quality data and consented to inclusion. A separate analytic file, 2016 SEER*Stat Database: National Program of Cancer Registries (NPCR) and SEER Incidence – Analytic file - 1998-2013, was used for U.S. comparison data for obesity-related and HPV-associated cancers.

National Comparisons:

All statistical comparisons in this report involving national estimates are based on rates for U.S. whites due to the predominantly white population in Maine,

although CINA or SEER incidence rates and national mortality rates for both whites and all races have been provided. These rates appear under the headings "CINA Whites" and "CINA All races" or "U.S. Whites" and "U.S. All races."

CASE DEFINITIONS

Incidence Case Definitions:

Case definitions for single cancers and "all sites" are included in Appendix 1. Cancer groupings used in this report (HPV-associated, obesity-related, tobacco-related) are described below and definitions are included in Appendix 2.

Mortality Case Definitions:

Case definitions of underlying cause of death using ICD-10 codes are included in Appendix 3.

Tobacco-related Cancers:

Tobacco-related cancers excluding lung and bronchus cancer are included in this report due to their clinical and epidemiologic significance.

Tobacco-related cancers are those that are defined by the U.S. Surgeon General as having direct causal relationships to tobacco use (*Surveillance for Cancers Associated with Tobacco Use — United States, 1999–2004*). In 2014, based on *The Health Consequences of Smoking: 50 Years of Progress. A Report of the Surgeon General*, the list was expanded to include the following cancers: liver, colon and rectum in addition to laryngeal, oral cavity and pharynx, esophageal, stomach, pancreatic, kidney and renal pelvis, urinary bladder, cervical and acute myeloid leukemia.

Obesity-related Cancers:

According to the 2007 expert report published by the World Cancer Research Fund and American Institute of Cancer Research, there is convincing evidence that greater body fat is a cause of adenocarcinoma of the esophagus, as well as cancers of the pancreas, colon, rectum, kidney, renal pelvis, endometrium and breast (postmenopausal).

HPV-associated Cancers:

A separate set of tables presenting cancers that are associated with Human Papillomavirus (HPV) infection are included in this report. Rectum cancer

has been added to this grouping this year. There is variability in the degree of association; for example, nearly 100 percent of cervical cancers, 90 percent of anal cancers and 35 percent of oropharyngeal cancers are associated with HPV. The proportion of HPV association for oral and oropharyngeal cancer sites is increasing, with HPV infection overtaking tobacco and alcohol in the causation of these cancers.

GEOGRAPHY

Maine Public Health Districts:

Maine has eight geographically defined public health districts and one public health district based on tribal affiliation (Wabanaki). Cancer rates have been calculated for the eight geographical districts including the counties within each district. Cancer rates were not calculated for the Tribal district because of small numbers. The table below shows the counties in each district.

Public Health District	Counties
Aroostook District	Aroostook County
Central District	Kennebec County, Somerset County
Cumberland District	Cumberland County
Downeast District	Hancock County, Washington County
Midcoast District	Lincoln County, Knox County, Sagadahoc County, Waldo County
Penquis District	Penobscot County, Piscataquis County
Western District	Androscoggin County, Franklin County, Oxford County
York District	York County

Rates by County/District:

The number of new cancer cases reported in a county or district varies from year to year, and some of this variation is due to chance. County or district level

cancer rates are more likely to vary on an annual basis than state level rates. In addition, counties/districts with smaller populations tend to have greater variation between time periods. In general, when there are less than 30 cancer cases per year in a geographic entity, it can be difficult to distinguish between normal variation and meaningful changes in cancer rates.

In this report, multiple years of data are combined when producing the county or district rates. Although combining years can make the rates more reliable, caution must still be used when interpreting county and district rates because of small populations.

TRENDS

Figures:

This report includes figures describing trends in cancer incidence and mortality in Maine. The incidence trends figures show rates for all cancer sites combined from 1995 to 2013 and selected cancers from 2000 to 2013.

The mortality figures show trends in mortality rates for all sites combined and selected cancers from 1969 to 2013. Separate cancer mortality trend figures were prepared for males and females.

Notes:

- A shaded cell indicates that the Maine rate is significantly higher than the U.S. White rate.
- Tobacco-related cancers excluding lung and bronchus defined as laryngeal, oral cavity and pharynx, esophageal, stomach, pancreatic, kidney and renal pelvis, bladder, cervical, colon and rectum, liver and acute myeloid leukemia. Most of these cancers also appear separately in the table.
- Cancer sites are ordered by descending Maine incidence rates.
- Incidence case definitions are based on SEER Site Recode ICD-O-3/WHO 2008.
- Incidence case definitions exclude histologies consistent with Kaposi sarcoma and mesothelioma, where applicable.
- Rates are calculated per 100,000 population and age-adjusted to the year 2000 U.S. standard population.
- Subgroup counts might not sum to Maine total due to rounding.

Notes:

- A shaded cell indicates that the Maine rate is significantly higher than the U.S. White rate.
- Tobacco-related cancers excluding lung and bronchus defined as laryngeal, oral cavity and pharynx, esophageal, stomach, pancreatic, kidney and renal pelvis, urinary bladder, cervical, colon and rectum, liver and acute myeloid leukemia. Most of these cancers are also reported separately in the table.
- Cancer sites are ordered by descending incidence rates.
- Incidence case definitions are based on SEER Site Recode ICD-O-3/WHO 2008.
- Incidence case definitions exclude histologies consistent with Kaposi sarcoma and mesothelioma, where applicable.
- Rates are calculated per 100,000 population and age-adjusted to the year 2000 U.S. standard population.
- Subgroup counts might not sum to Maine total due to rounding.
- ~ Rates and counts are suppressed when count is less than 10 cases.

Notes:

- A shaded cell indicates that the Maine rate is significantly higher than the U.S. White rate.
- HPV-associated Cancers defined as all carcinomas of the Cervix, and squamous cell carcinomas for vagina, vulva, penis, anus, rectum and oropharynx. Oral cavity and oropharyngeal cancers are limited to the subsites specified in Appendix 2.
- Incidence case definitions are based on SEER Site Recode ICD-O-3/WHO 2008.
- Incidence case definitions exclude histologies consistent with Kaposi sarcoma and mesothelioma, where applicable.
- Rates are calculated per 100,000 population and age-adjusted to the year 2000 U.S. standard population.
- Abbreviations: AA = Age-adjusted; CI = Confidence Interval; SEER = Surveillance, Epidemiology, and End Results; Count = Annual Count.
- Cancer sites are ordered by sex-specific cancers and then alphabetically.
- Subgroup counts might not sum to Maine total due to rounding.

Notes:

- A shaded cell indicates that the County/District rate is significantly higher than the Maine rate.
- Mortality case definitions are based on ICD-10 codes (See Appendix 3).
- Rates are calculated per 100,000 population and age-adjusted to the year 2000 U.S. standard population.
- Abbreviations: AA = Age-adjusted; CI = Confidence Interval; Count/Yr = Average Annual Count.
- Subgroup counts might not sum to Maine total due to rounding.

INCIDENCE CASE DEFINITIONS

Incidence data are based on SEER site recode ICD-O-3/WHO 2008 definitions, version 2008. Available at: http://www.seer.cancer.gov/siterecode/icdo3_dwhoheme/index.html. The primary site reported is the site of origin and not the metastatic site. In general, the incidence rate does not include recurrences. The number of cancers may include multiple primary cancers occurring in one patient.
