Water Resources & Shoreland Habitats

Houlton

This map is nonregulatory and is intended for planning purposes only

Organized Towns

Unorganized Towns

Impervious — Impervious surfaces including buildings and roads.

Atlantic Salmon Habitat — Reflects surveys on selected Maine streams.

Wild Brook Trout Priority Conservation Areas — Reflects surveys on selected Maine streams.

Maine Heritage Fish Waters — Lakes and ponds in Maine that have been designated as Maine Heritage Fish Waters according to Title 12, §12461. State Heritage Fish Waters.

Source Water Protection Areas — Buffers that represent source water protection areas for wells and surface water intakes that serve the public water supply. Their size is proportional to population served and/or by the type of water supply system. These buffers range from 300 to 2,500 feet in radius.

Wells (Modeled) — Maine Drinking Water Program data modeling the location of bedrock source water protection areas and sand/gravel aquifer areas

Aquifers — Flow of at least 10 gallons per minute.

NWI Wetlands — National Wetlands Inventory (NWI) uses aerial photographs to approximate wetland locations. NWI data is not comprehensive mapping of wetlands resources and typically under represents the presence of wetlands on the landscape.

Shoreland Areas — Depicted using common regulatory zones including a 250-foot-wide strip around Great Ponds (ponds of at least 10 acres, rivers, coastline, and wetlands of at least 10 acres and 75-foot-wide strip around streams. For more information on Mandatory Shoreland Zoning - https://www.maine.gov/dep/land/slz/

Shellfish Growing Areas — Distributions of molluscan shellfish species in Maine.
